

CAR PARK COATING SYSTEMS

MULTIBLAST
INDUSTRIAL FLOORING SPECIALISTS

CAR PARK COATINGS

Car Park floors need to be tough and durable to handle the everyday stresses of constant vehicle traffic. Installing an epoxy coating system to your car park floor will provide an attractive, hard-wearing, long lasting, and easy to clean sealed surface in line with Australian Slip Resistant Standards.

At Multiblast, our industrial car park flooring systems can be tailored and adapted to suit the environmental needs of any project.

Durable & Abrasion Resistant

Hard wearing and resistant to constant vehicle traffic

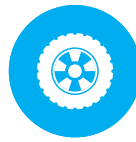

Slip Resistant & Safe

Available in a range of textures to provide a non-slip surface in accordance with Australian Standards

Chemical & Oil Resistant

Easy to clean and improves stain resistance

Reduces Tyre Squeal

High textured finish to minimise noise created by vehicle tyres

Enhances Appearance

Brightens up dull and dark car parks with coloured coatings and line marking

Longevity

Quality and long-term flooring solution for your carpark

APPLICATION SUITABILITY:

- ◆ BASEMENT CAR PARKS
- ◆ MULTI-STORY CAR PARKS
- ◆ EXTERNAL CAR PARKS
- ◆ GARAGES
- ◆ RAMPS

ADVANTAGES OF A CAR PARK FLOOR COATING SYSTEM

DURABLE & ABRASION RESISTANT

Car park floors are exposed to hot tyres, abrasion and chemicals over time, therefore highly durable coatings are essential. Our epoxy coating systems are high strength and specifically designed to withstand heavy impact and constant vehicle traffic over time.

SLIP RESISTANT

Our car park coatings can be tailored to suit any specific slip resistance requirements, making it easy to keep patrons safe whilst also maintaining your insurance and health and safety obligations. With the inclusion of Aluminium Oxide grit we can control the slip resistant properties of the finished floor. Traction can be improved, and a slip rating up to P5 can be achieved with NATA approved slip test reporting available in accordance with the Australian Standards.

CHEMICAL RESISTANT AND EASY TO CLEAN

The coatings used are resistant to most automotive fluids such as petrol, diesel and engine oil. The coatings offer a sealed and impervious surface so that cleanability is greatly improved and staining is minimised.

NOISE REDUCTION

Our epoxy floor coatings can be adapted to prevent the noise made by tyres, often referred to as 'tyre squeal'. A trafficable car park coating can greatly improve the traction between tyres and the floor surface, and as a result these unpleasant noises are minimised.

COLOURFUL, ATTRACTIVE & SAFE

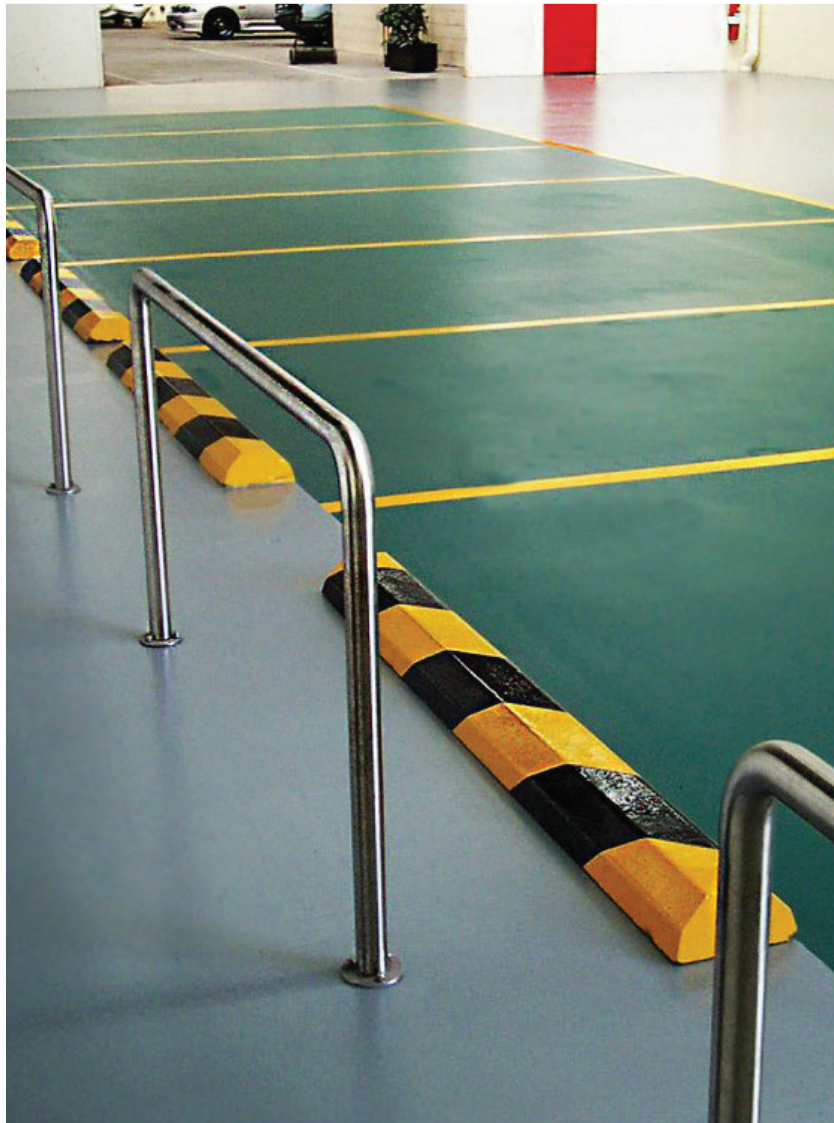

The appearance and first impression of a car park can be greatly improved by incorporating various colours, demarcation, line marking and signage. Our coatings come in a wide range of colours with customised line marking and layout options available. Safety line marking and walkways can be installed to ensure pedestrian safety and assist with traffic management.

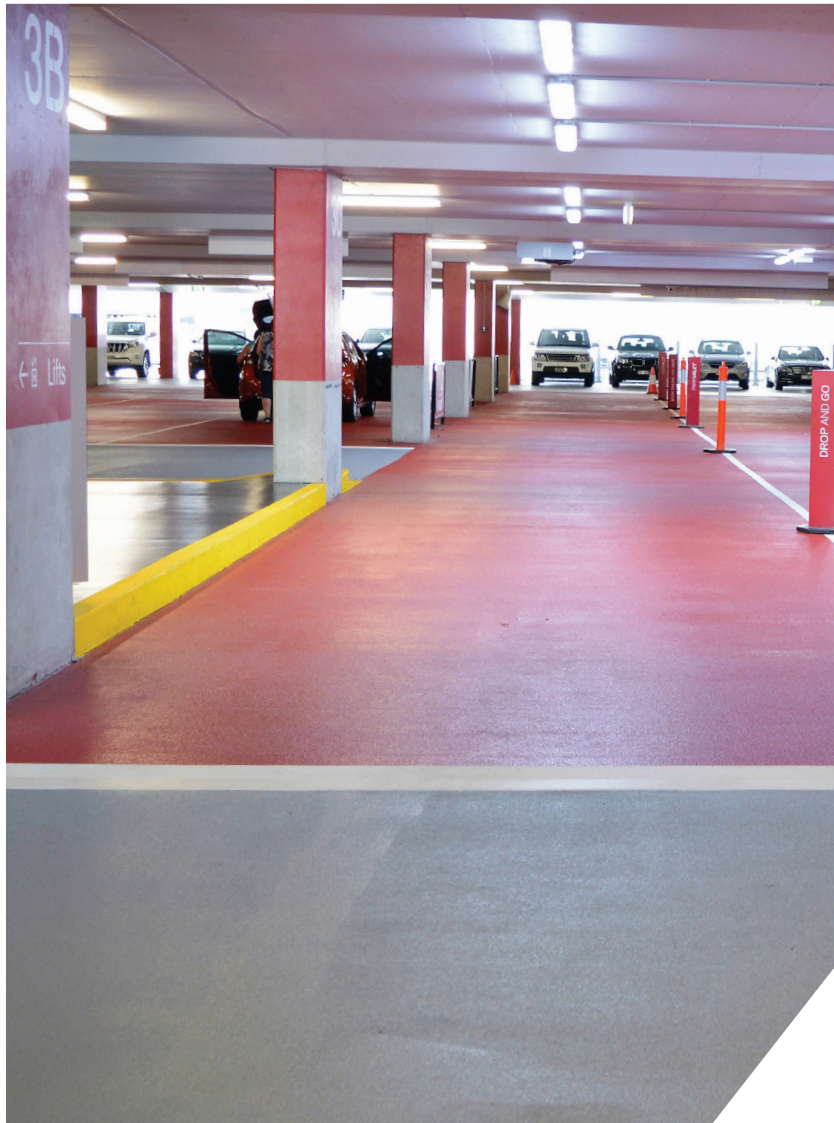

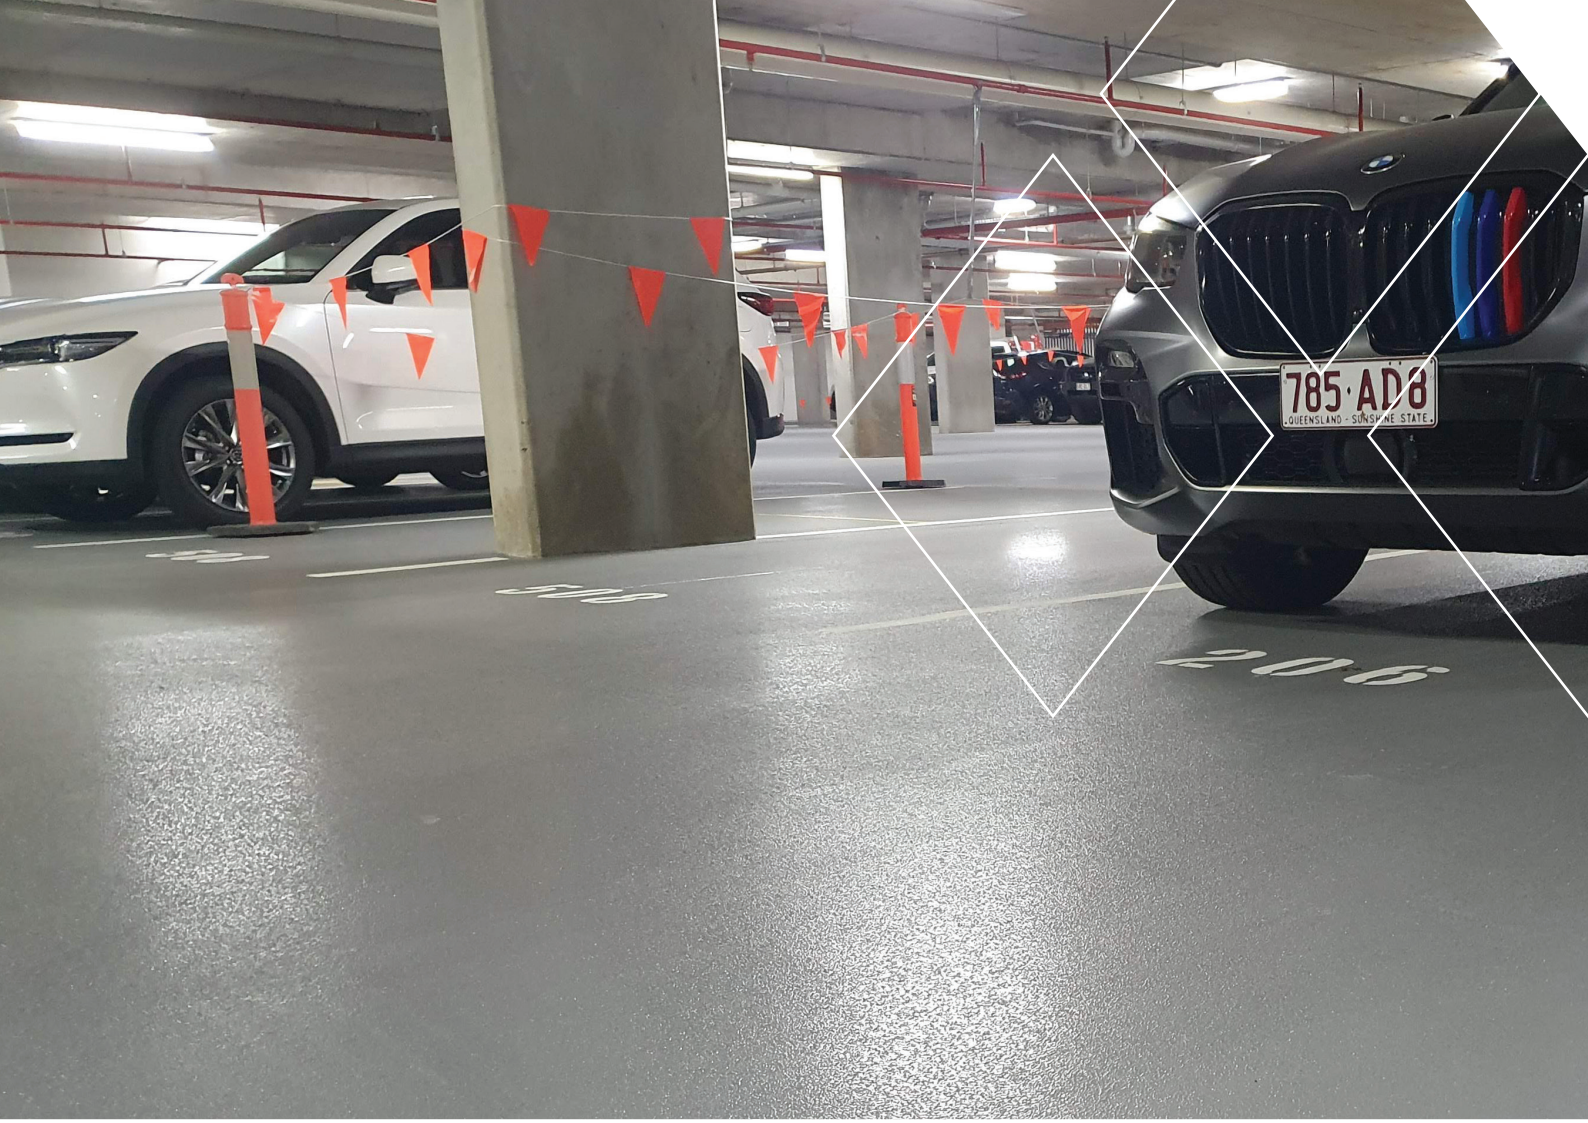

LONGEVITY

The durability, high wear resistance and chemical resistance of epoxy coatings ensures a long-term flooring solution for your car park.

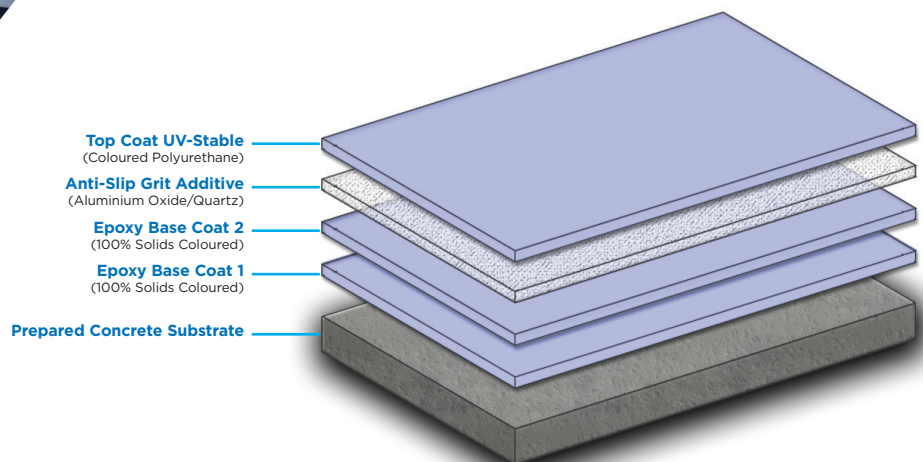

TECHNICAL PROFILE

Colour Options:	Australian Standard AS2700 Colour Chart & RAL Colour Standards
Slip Resistant	PO-P5 / RO-R12 Slip Rating
Thickness	400 microns to 4000 microns (0.4mm - 4mm)
Temperature Resistance	0°C - 70°C
Finish	Gloss / Satin
Environmentally Friendly	Green Star certified & low VOC products available
UV Light Resistant*	UV Stable top-coats available
Warranty	Up to 10 Years
